34th International Symposium
on Remote Sensing of Environment **Sydney 2011**

The Organizing Committee of the 34th International Symposium for Remote Sensing of the Environment (ISRSE) cordially invites you to visit Sydney and participate in what promises to be an excellent high quality Symposium on Remote Sensing of the Environment. ISRSE has become one of the main forums for programmatic discussions on remote sensing components of the 'Global Earth Observation system of Systems- GEOSS', currently being implemented through the Group on Earth Observation GEO, composed of 77 member countries and over 100 participating organizations.

Sydney, Australia's largest city is strategically positioned with excellent access to Asia Pacific countries. This ensures that a significant number of remote sensing scientists from this region will be able to attend. The Symposium will provide a platform for countries with established and emerging earth observation programs to report on their progress, as well as new initiatives in the remote sensing arena.

Abstract Submission opening in March 2010!
For more information, visit www.isrse34.org.

Host Organisations

Typical key topics that are likely to be covered include:

- Climate change and atmosphere considerations
- Agriculture: food crisis and reducing poverty and hunger
- Water: a precious but degraded resource
- Disaster reduction and response
- Airborne remote sensing technologies
- Forests and ecosystems
- Marine resources and dynamics
- Energy management
- Data and information systems: spatial data infrastructures and emerging technologies
- Societal benefits of earth observations: applications and assessment methodologies
- National, regional, international programs and applications
- Achievements of GEO in the past 10 years
- Environmental monitoring in the mining and petroleum industries
